

## **Goal**

- **We are guarding president's car with a security motorcade**

## **Game Mechanics:**

- Slide: To change direction of motorcade sideways

## **In Game Details:**

- We are running on a platform while controlling motorcade of US President
- We have 7 cars on motorcade – 1 limo for president and 6 security vehicles (2 each on both sides and 2 front)
  - All cars move towards same direction with single slide control
- There are different kind of attacks towards president's car and we try to block them with security vehicles ➤ Attackers move from opposite direction
- When we use a security vehicle to avoid an attack attempt, we lose that car
- If limo receives 2 attacks, we fail that level
- Level based

## **Look & Feel / Camera:**

- Third Person/Runner

## **Artwork& Visual Requirements:**

- 3D
- Low poly / colorful design
- Impressive limo
- Security cars are big, Hummer-type
- At end of each level, we receive medals for succeeding guarding the President
- Platform is not flat-horizontal. It leans sideways, climbs or descends downhill; sometimes even turns upside-down like a rail coaster. As we only control diameter, focusing how path will progress is our main challenge

## **Progression:**

- Level based - platform gets harder with complicated route design
